

Refresh Win 7/Win 8, Upgrades and Deployment

When it comes to the deployment of new technology and operating systems into your environment it often puts an unnecessary drain on your resources. For over 30 years, Bell Techlogix has been instrumental in enterprise-wide deployments and upgrades for organizations of all sizes and scale. Our team of project managers, highly certified engineers, architects and technicians will work closely with you to ensure the seamless transition and professional oversight to ensure the successful implementation and deployment into your environment. Bell Techlogix offers this capability through our Technology Logistics Centers that provide a base of operations for a wide range of IT services, including project management, Desktop Lifecycle Management, workstation deployment and Infrastructure Services, refresh, image creation/installation/configuration and crisis management.

Win 7/Win 8 Refresh

For Windows 7 and Windows 8 projects, Bell Techlogix will work with you to ensure the following:

- Enable streamlined, repeatable capability to deploy the latest applications and hardware to users per business requirements
- Deliver applications to users through a simplified and flexible method, independent of the computing platform
- Implement, manage and maintain an enterprise-wide, consolidated application portfolio which provides visibility into current state and facilitates cost-efficient application lifecycle management
- Reduce the IT funds expended on labor, hardware and software through automation, centralized management, optimization of the technical infrastructure and implementation of governance processes
- Leverage the latest security features and capabilities to protect sensitive corporate data and employee information, while allowing for increased compliance with IT security and regulatory requirements

Our workstation refresh capabilities have been developed with our clients in mind. Over the years we have built up a knowledge base of what steps are required in our projects to ensure seamless implementation. We also understand that every environment, every update, every upgrade is different and will always bring new features, functionality and challenges. If you want a flexible partner you can trust, Bell Techlogix is your answer.
